1 Introduction

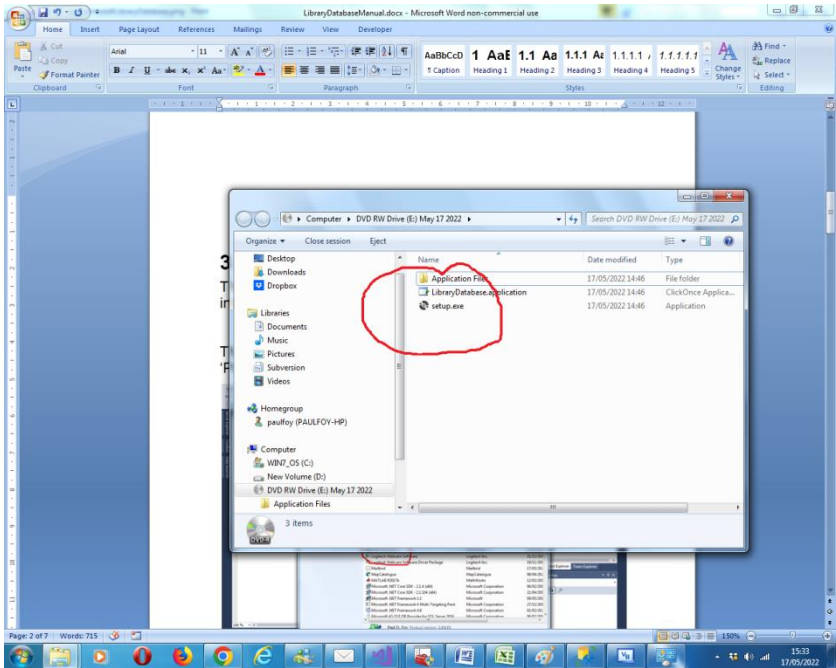

This is a manual for the installation and use of the application 'WebsiteEditor'. The program is a Windows application, for making the same edit to a series of files.

2 Pre-requisites.

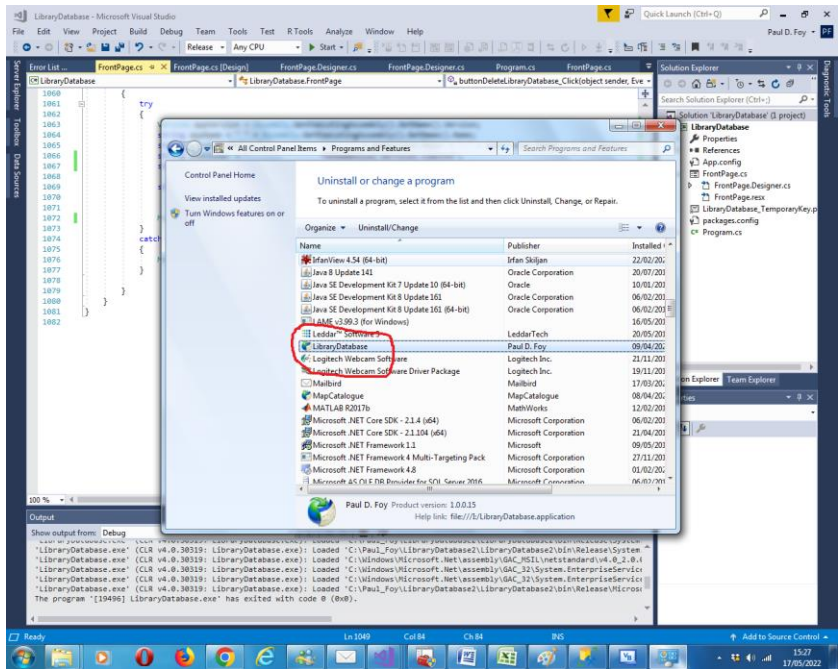

1. A PC running Windows 7 or above.
2. A USB stick or optical drive containing the program setup files, together with this manual (available online).

3 Installation/Removal

The program is installed by inserting the supplied stick or disc into the PC and running the 'setup.exe' program on it.

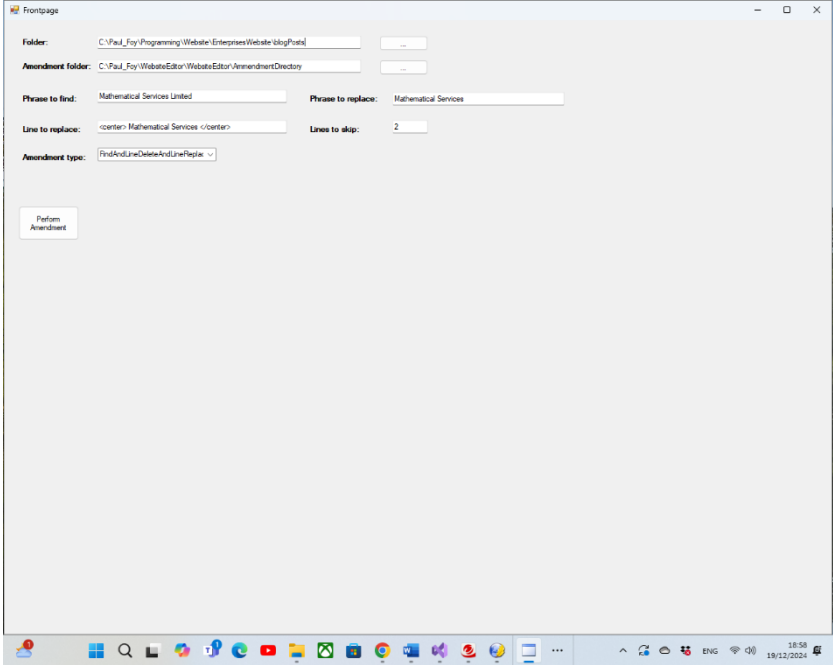

The program can be removed from the PC, by using the 'Program & Features' menu from within Control Panel.

4 Website Editor

The application has 1 page:

The folder containing all the files with which an amendment will be attempted is selected in the **Folder** textbox.

The amended files, each having the same name as the original file, are created in the **Amendment folder**, which must be selected.

The behaviour on pressing the **Perform Amendment** button is governed by the **Amendment type** combo box:

4.1 FindAndReplace

All occurrences of **Phrase to find** are replaced by **Phrase to replace**.

4.2 FindAndLineReplace

All lines containing **Phrase to find** and replaced by the line **Line to replace**.

4.3 FindAndDelete

All occurrences of **Phrase to find** are removed.

4.4 FindAndLineDelete

All lines containing **Phrase to find** are removed, together with **Lines to skip** additional lines.

4.5 FindAndLineDeleteAndLineReplace

Any line containing the phrase **Phrase to find** is deleted along with **Lines to skip** subsequent ones. Then the line **Line to replace** is inserted in their place.
